

# KZN MONEY MARKET FUND

JUNE 2023

The KZN Money Market Fund is a low risk fund that aims to achieve above average money market returns that perform in line with or slightly better than inflation over time.

The fund invests only in money market instruments and cash. Specialist asset managers are appointed to select the best money market instruments to investment in and the fund maintains a high degree of liquidity and capital preservation.

The fund has little or no chance of capital loss and is not expected to achieve any significant real growth of capital over the long-term. As a result, the fund is best suited to members who have a very short term (1 year or less) investment horizon. This fund is not appropriate for long term investing.

The portfolio complies with the prudential investment guidelines set out in Regulation 28 of the Pensions Funds Act.

## MONTHLY COMMENTARY

Markets performed well in June, buoyed by the raising of the US debt ceiling, falling energy prices and resilient economic growth - but this resilience will lead to higher inflation for longer and a longer pause in interest rate hikes by the Federal Reserve (the Fed). It is therefore important to focus on what global policymakers do, rather than on what they say. The Fed maintained a hawkish tone but did not raise rates in June. On the other side of the world, China's official policy of prioritising economic growth was reflected in yet another rate cut and further fiscal stimulus, causing the market to rally briefly. However, the market is not yet convinced there is sufficient stimulus to promote robust reflation. While global energy prices have fallen, the current Ukrainian counteroffensive unfortunately aggravates geopolitical risk. If significant territorial shifts occur and Russia loses major ground, Russia may intensify its military pressure and further cut commodity exports. The Wagner group's push towards Moscow increases this risk.

Investor sentiment has surged to its highest level since late 2021, as evidenced by the CNN risk appetite indicator, which is sitting in extreme-greed territory. This suggests that equities are due for a correction, but a deep correction is not expected. The short-term outlook is dominated by two risks: China's policy support and the Fed's rhetoric on inflation. Further negative news on either of these fronts could be a catalyst for a pullback in equity markets. That said, there are reasons to believe that should a US recession occur, it will be a shallow one. First, there are no major imbalances or debt build-ups in corporates or individuals. Second, high cash balances have put a floor under household wealth. Third, the US regional banking system remains contained. And fourth, inflation is continuing to fall. BCA estimate that with inflation below 4%, real earnings will turn positive and a US earnings rebound in 2H is likely. In China, small steps are already being made to increase policy support. Absent a major escalation in geopolitical risk in the Ukraine or elsewhere, earnings should continue to grow this year, supporting equities. However, the lagged impacts of higher interest rates could take their toll next year.

The FTSE/JSE CAPPED SWIX Index increased by 3.8%, Industrials were up 3.7% and Financials climbed by 11.4%. The JSE All Bond Index improved by 4.6%, while the rand appreciated by 4.7% relative to the US dollar.
