KZN MANAGED FUND

MAY 2025

The KZN Managed Fund is a moderately aggressive fund that aims to achieve above average returns over the longer term.

The fund can invest across all local and foreign asset classes. The fund makes use of a blend of three good quality asset managers who have been given fully discretionary global balanced mandates. These asset managers have the freedom to select the allocation to each of theseasset classes and the most attractive securities to invest in within each asset class. A portion of the fund is managed on a strategic asset allocation basis, where the long term allocation between the various asset classes have been set, taking into account the fund's long term aim. Specialist asset managers have been appointed to manage each of the asset classes and have the freedom to select the most attractive securities to invest in within each asset class.

Due to its relatively high allocation to growth assets (such as local and foreign shares and private equity), the fund has a high chance of capital loss in the short term, but is expected to achieve real growth of capital over the long-term. As a result, the fund is best suited to members who have a longer term (5 years or more) investment horizon.

The portfolio complies with the prudential investment guidelines set out in Regulation 28 of the Pensions Funds Act.

MONTHLY COMMENTARY

Global markets showed signs of recovery in May, and the US dollar strengthened following announcements of key trade agreements. Even with the temporary tariff pause between the US and China and excluding EU tariffs of 50%, the average effective US tariff rate stands at about 13%. JPMorgan forecasts that core inflation (CPI) could rise to 7% in the coming months. Moody's joined Fitch (2023) and S&P (2011) in lowering the US from its top triple-A status. The downgrade cited declining fiscal metrics despite economic strengths. Part of the fiscal concern is Trump's "big, beautiful" tax bill, estimated to add $3.8 trillion to public debt over the next decade. Unlike the 2011 S&P downgrade, which led investors to flock to US Treasuries and supported stocks and lowered bond yields, the current environment has seen a weakening dollar and rising bond yields. Rising inflation, falling growth, aggressive fiscal policy and credit downgrades have pushed bond yields higher and weakened the dollar. While Trump may not explicitly (or even secretly) want a weaker dollar, his actions are creating one. A US recession now appears unlikely, however.

The recent agreement between the US and China to roll back tariffs marks a significant de-escalation in trade tensions, while energy prices have remained low, supporting consumer and business spending, and US fiscal support is likely to increase next year. Markets are likely to face headwinds despite growth upgrades. The Euro area's purchasing managers index (PMI) has dropped to a six-month low, signalling slowing economic momentum. The current US tariff rate of 13.4% represents a substantial drag on trade, with estimates suggesting global GDP could be reduced by 0.5%. Downside risks persist, particularly if countries retaliate with a new round of tariffs. Growth will slow naturally into the middle of the year as global trade (which was front-loaded ahead of US tariffs) normalises, while heightened uncertainty has caused businesses to slow hiring and investment, which will lead to consumer caution as prices rise. Rising inflation and the US credit downgrade have pushed up bond yields, creating a challenging environment for stocks, as higher yields affect valuations and investor sentiment. The FTSE/JSE Capped SWIX Index improved by 3.0%, while Industrials and Financials rose by 4.0% and 2.1%. The JSE All Bond Index increased by 2.7% and the Rand strengthened 2.9% against the Dollar.
