

KZN MODERATE FUND

SEPTEMBER 2024

The KZN Moderate Fund is a 50% / 50% combination of the KZN Managed Fund and KZN Defensive Fund. It is a fund with moderate risk that aims to deliver real growth but with less volatility.

The portfolio is well diversified and invests across all local and foreign asset classes and makes use of good quality balanced asset managers and specialist asset managers within certain asset classes.

Over the longer term returns are expected to be less volatile but at the same time lower than for a typical balanced fund, because of the 50% exposure to the KZN Defensive Fund.

Due to its moderate allocation to growth assets, the fund has a moderate chance of capital loss in the short term, but is expected to achieve real growth of capital over the long-term, albeit lower than that of a typical balanced fund. As a result, the fund is best suited to members who have medium term (3-5 years) investment horizon.

The portfolio complies with the prudential investment guidelines set out in Regulation 28 of the Pensions Funds Act.

MONTHLY COMMENTARY

The S&P 500 closed at record highs after the first cut in the current cycle by the Federal Reserve. The Fed cut interest rates by 0.5% and updated its economic projections to reflect increased confidence for lower inflation while raising risks around the labour market. Despite the cooling labour market, the consumer sector appears robust. Household wealth has significantly increased due to rising values in housing and financial markets, and household balance sheets are in good shape, having undergone a prolonged period of deleveraging.

China's central bank unveiled a huge stimulus package to boost the economy, sending commodities and emerging market stocks higher. This is positive but is unlikely to sufficiently improve domestic consumer confidence. China faces a significant deflationary spiral, with the core issue not being that the Chinese government has excessive debt - this can be financed domestically - but that the ageing population and property market crunch have diminished consumer confidence and spending. The government needs to step in with supportive fiscal spend, i.e. take on more debt.

South African assets and the rand rallied on the back of the Fed cuts, which weakened the dollar and lowered global interest rates, and on Chinese stimulus, which drove up commodity prices and resources. The South African Reserve Bank cut interest rates by 0.25%.

The S&P Global flash PMIs show that the contraction in manufacturing activity in developed markets has accelerated, while services PMIs continue to expand in most regions. We remain overweight US, where the consumer accounts for 69% of GDP. The US is a consumption-based economy and is often seen as the global consumer of last resort; while headwinds are rising, the US consumer remains robust. Eurasia and emerging markets (EMs) are largely production-based economies enmeshed in the global manufacturing supply chain. As the world is currently in a manufacturing recession, the producing economies led by China's slowdown are struggling. Thus, while commodity prices, EMs and Eurasia may rally in the short term on the back of rate cuts and Chinese stimulus, longer-term commodity prices will continue to struggle and EMs and Eurasia will continue to underperform.

As always, risks remain. Global shipping costs remain high and geopolitical risks remain elevated, with Israel escalating its campaign against the Iran-backed Hezbollah militant group through a massive bombardment of Lebanon, killing more than 500 people.

The FTSE/JSE Capped SWIX Index rose by 4.0%, Industrials and Financials were up 5.4% and 2.5%. The JSE All Bond Index increased 3.9%, while the Rand strengthened 2.9% against the Dollar.
