

KZN MONEY MARKET FUND

JULY 2025

The KZN Money Market Fund is a low risk fund that aims to achieve above average money market returns that perform in line with or slightly better than inflation over time.

The fund invests only in money market instruments and cash. Specialist asset managers are appointed to select the best money market instruments to investment in and the fund maintains a high degree of liquidity and capital preservation.

The fund has little or no chance of capital loss and is not expected to achieve any significant real growth of capital over the long-term. As a result, the fund is best suited to members who have a very short term (1 year or less) investment horizon. This fund is not appropriate for long term investing.

The portfolio complies with the prudential investment guidelines set out in Regulation 28 of the Pensions Funds Act.

MONTHLY COMMENTARY

As we enter the third quarter of 2025, markets have continued to hit new highs despite rising geopolitical risks. Investors are confident that strong fiscal and monetary policy support will prevail, but market challenges remain significant.

Global tailwinds

- The Fed put: Markets expect the next Fed chair to cut rates aggressively under Trump's influence - even amid tariff inflation. This has supercharged the Fed put and forced investors to switch into real assets protected from inflation.
- Massive fiscal stimulus: The US has joined China and Japan in deploying coordinated fiscal stimulus equal to 8-10% of GDP, supporting consumer and business confidence. The EU is increasing its fiscal stimulus via increased defence spend.
- US dollar weakness: The weaker dollar supports global growth by easing financial conditions, boosting commodity prices and lowering funding costs abroad.

Global headwinds

- Tariffs higher than expected, with greater impact: Completed deals are at higher than the current 10% level, and some tariffs are not easily solved by trade - such as 50% tariffs on copper and Brazilian goods, a 100% secondary tariff on Russian goods and penalties on Chinese transshipments and BRICS-aligned countries. The effective tariff rate in June was only 9.5% - compared to the statutory level of 14% - due to delayed enforcement, stockpiling and shifting trade routes. The statutory level is expected to rise to 20% on 1 August.

- Immigration reversal: The rollback of Biden-era immigration policies has removed legal-worker rights from 1.1 million jobs.
- Tariff frontloading: The early surge in exports to the US ahead of tariff implementations boosted H1 growth but will likely slow in the second half of 2025 as inventories normalise and trade volumes fall.

The combination of expansive fiscal stimulus and expectations of looser monetary policy supports risk assets, and investors appear more focused on inflation risks than slowing growth. As a result, investors are fleeing the dollar, cash and bonds and switching into real assets such as equities, commodities, precious metals and bitcoin. We are not fighting the Fed put for now, but we are watching for two key risks: tight immigration policies that could slow US growth and an inflation spike that could shake up asset prices later this year. The FTSE/JSE Capped SWIX Index improved by 2.2%, while Industrials and Financials rose by 1.3% and 1.4%. The JSE All Bond Index increased by 2.7% and the Rand weakened 1.8% against the Dollar.
