KZN MODERATE FUND

NOVEMBER 2023

The KZN Moderate Fund is a 50% / 50% combination of the KZN Managed Fund and KZN Defensive Fund. It is a fund with moderate risk that aims to deliver real growth but with less volatility.

The portfolio is well diversified and invests across all local and foreign asset classes and makes use of good quality balanced asset managers and specialist asset managers within certain asset classes.

Over the longer term returns are expected to be less volatile but at the same time lower than for a typical balanced fund, because of the 50% exposure to the KZN Defensive Fund.

Due to its moderate allocation to growth assets, the fund has a moderate chance of capital loss in the short term, but is expected to achieve real growth of capital over the long-term, albeit lower than that of a typical balanced fund. As a result, the fund is best suited to members who have medium term (3-5 years) investment horizon.

The portfolio complies with the prudential investment guidelines set out in Regulation 28 of the Pensions Funds Act.

MONTHLY COMMENTARY

Markets bounced strongly in November, with the Nasdaq up more than 10% , fuelled by signs of easing inflation and a potentially softening US labour market. Markets are finally seeing the end of the Federal Reserve's aggressive monetary tightening after it had raised rates by a cumulative 5.25 percentage points since March 2022, pushing mortgage rates to their highest level in two decades. Similarly, global growth was expected to slow to 2.1% in 2023, its lowest level since the 2008-09 financial crisis, but the most anticipated US recession of all time did not arrive, and 2023 growth is expected to be 2.9%. The markets are experiencing a Goldilocks period of slowing (but non-recessionary) growth and falling inflation. However, the risk of a global recession in 2024 has increased, as central banks around the world have raised interest rates to combat inflation.

We expect the high-interest rate Table Mountain scenario to continue until the second half of 2024, tempered by slower growth and falling inflation. Inflation will fall on the back of reduced supply-bottlenecks, China's export of deflation, and strong, improved labour productivity. Growth will be supported by a robust consumer and a continuation of manufacturing green shoots

The US will thus avoid a recession. Global growth is predicted to reach 3.2% in 2024, but challenges like China's property slump and high rates keep our focus on developed markets. Key risks for 2024 include:

Risk of recession: High debt and rising interest rates could spark a recession, impacting stock markets and corporate earnings.
Geopolitical tensions: Escalating conflicts among major nations could lead to trade wars or military disputes, affecting the global economy and increasing inflation.
Political changes: The 2024 elections, particularly in the US and South Africa and Taiwan's 13 January election, may bring significant market impacts as a result of shifts in political dynamics.
Extreme weather threats: Climate change is leading to severe weather events, with significant disruptions to global supply chains possible.
Technological risks: Advancements in large language models offer benefits but also pose risks, especially in spreading misinformation.

The FTSE/JSE CAPPED SWIX Index increased by 8.3%, Industrials were up by 10.5% and Financials jumped by 8.7%. The JSE All Bond Index improved by 4.7%, while the rand depreciated by 1.1% relative to the US dollar.
