

# KZN AGGRESSIVE FUND

AUGUST 2026

The KZN Aggressive Fund is an aggressive fund that aims to maximise investment returns over the longer term. The fund maintains a high exposure to growth assets, such as local and foreign equities and gains additional exposure to growth assets via investments in local property and private equity. The fund's asset allocation is fixed and the fund makes use of specialist asset managers to select the most attractive securities to invest in within each asset class.

Due to its high allocation to growth assets, the fund has a high chance of capital loss in the short term, but is expected to achieve real growth of capital over the long-term. As a result, the fund is best suited to members who have a longer term (7 years or more) investment horizon.

The portfolio complies with the prudential investment guidelines set out in Regulation 28 of the Pensions Funds Act.

## MONTHLY COMMENTARY

Gold rallied 15% and bitcoin 27% after the US Treasury Department announced it would intervene in the US bond market following a surge in yields to their highest levels in decades. US national debt has just topped \$40 trillion, having accelerated faster than predicted, in part due to the tax cuts under last summer's Republican tax and spending bill, fuelling fears of a borrowing "doom loop". The US Treasury is now suppressing yields directly, a form of financial repression that, over time, could erode the currency's real value. This is a classic set-up for the debasement trade: Gold rallying as investors hedge against the erosion of currency purchasing power implied by financial repression. We have adjusted our positioning to hedge against a weaker dollar and a higher gold price. Higher precious metals prices support both the budget deficit and the trade deficit. South African bonds are now neutral, and we are overweight SA equities.

The AI bull run continues, pushing forecast 2027 earnings to record highs. It is important to note that these earnings are backed by lower ongoing profits when the revaluation of underlying investments is stripped out - and almost no cash flow when high capex is stripped out. Further risks include small language models, cheaper Chinese models and corporate price caps, which could compress AI profit margins.

For now, we remain cautiously overweight global equity but geopolitical risks remain elevated:

- US and Iran recently exchanged strikes for the first time in about a month, and the US announced Operation Economic Outcast to completely isolate Iran - including threats against anyone that conducts business with Tehran, risking an escalation of conflict between the US and China.
- Russia and Ukraine have continued to attack each other, and the Middle East conflict looks like it may run on a similarly extended timeline. Crude may fall on supply improvements, but diesel is being driven by Middle East and Russian refining capacity, and the global wheat price is experiencing similar supply disruptions as a result of the wars.
- In retaliation against proposed US tariffs, Canada has threatened to double its existing counter-tariffs on US steel and aluminium products and impose new duties, risking another escalation with the US.

The FTSE/JSE CAPI Index gained 4.6%, while Industrials and Financials declined by 5.8% and 1.4%, respectively. The JSE All Bond Index advanced by 0.7%, and the Rand strengthened by 2.5% against the Dollar.

## ACTUAL ASSET ALLOCATION AS AT 30 JUNE 2026
